DETAILED ACTION

1. Applicant's election with traverse of Group I involving SEQ ID NO: 136 is acknowledged. No argument has been presented. A complete reply to the final rejection must include cancelation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01. Pending claims to be examined 221-279,305,306,309-316,332-334.

Claims 221-279 are directed to an allowable process. The restriction to the single SEQ ID NO., is now subject to being rejoined. Restriction to single SEQ ID NO: is hereby withdrawn as the generic claim in Group I is allowed.

Claim Objections

2. Claim 310 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim 308. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 309 already recites that DNA polymerase has strand displacement activity.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 314-316 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A) Claims 314-316 are confusing because step recites cleaving sites that contain ribonucleotide but in step a, one of the Markush groups is nucleotide analog which is not a ribonucleotide. Correction is required.

SUMMARY

4. Claims 221-279,305,306,309,311, 313,332-334 are allowable. Claims 314-316 are free of the prior art but rejected under 112 second paragraph. Claim 310 is objected but free of the prior art. There is no prior art that teach or suggest the method of amplifying with chimeric primer with ribonucleotide on 3' terminus or 3' terminal side and strand displacement. The closest prior art is Kerns et al (US6,251,639) who teach a chimeric primer but the RNA is on the 5' end (see col. 20 line 35).

An unsuccessful attempt to reach Mr. Allen Yun by telephone was made to resolve remaining issues.
